

KILOWATTCHIARO.IT · LIVE IN PRODUCTION

KiloWattChiaro

(ClearKiloWatt)

The independent check on the solar purchase.

We check the quote — before anyone calls you.

Domenico Di Gangi · Pisa, Italy · AI Engineering Bootcamp — Demo Day

THE CUSTOMER

An Italian homeowner, with a bill that hurts

THE GOAL

**Clear savings.
Clean energy.**

Solar looks like a good idea — so they start asking around.

THE CUSTOMER

The doubts crowd in

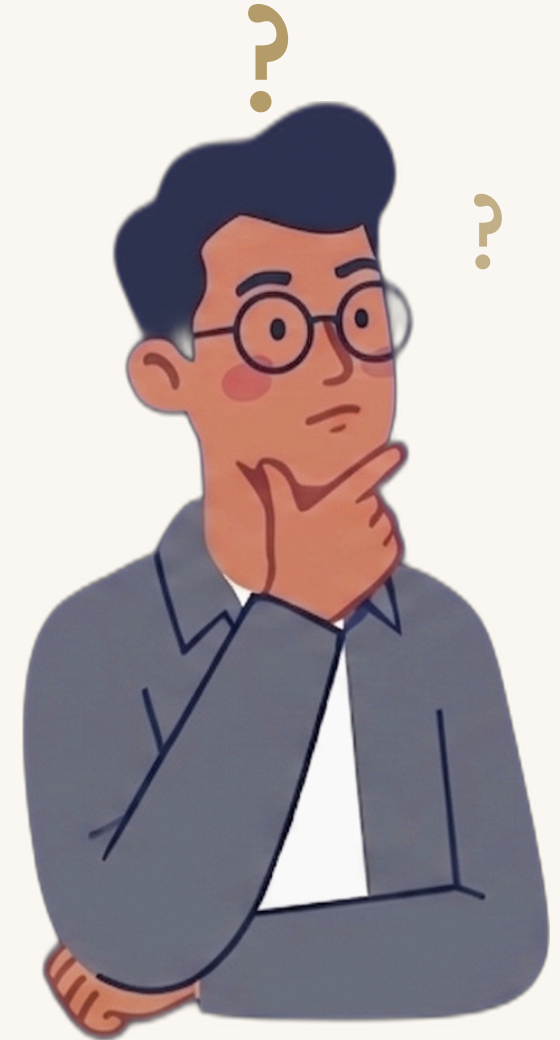

PAYBACK

When does this actually pay for itself?

THE QUOTES

When the quotes from installers come — are they fair? How is each configuration technically different?

“Is it worth it?” — and there is nobody neutral to ask.

THE MAIN COMPETITORS

How the lead market works today

One contact, resold to several installers — no guarantee it is worth anything

THE MOMENT

Italian home solar just got harder

–27.6%

residential installations, 2025
274,537 → 198,667

The tax-credit cliff.

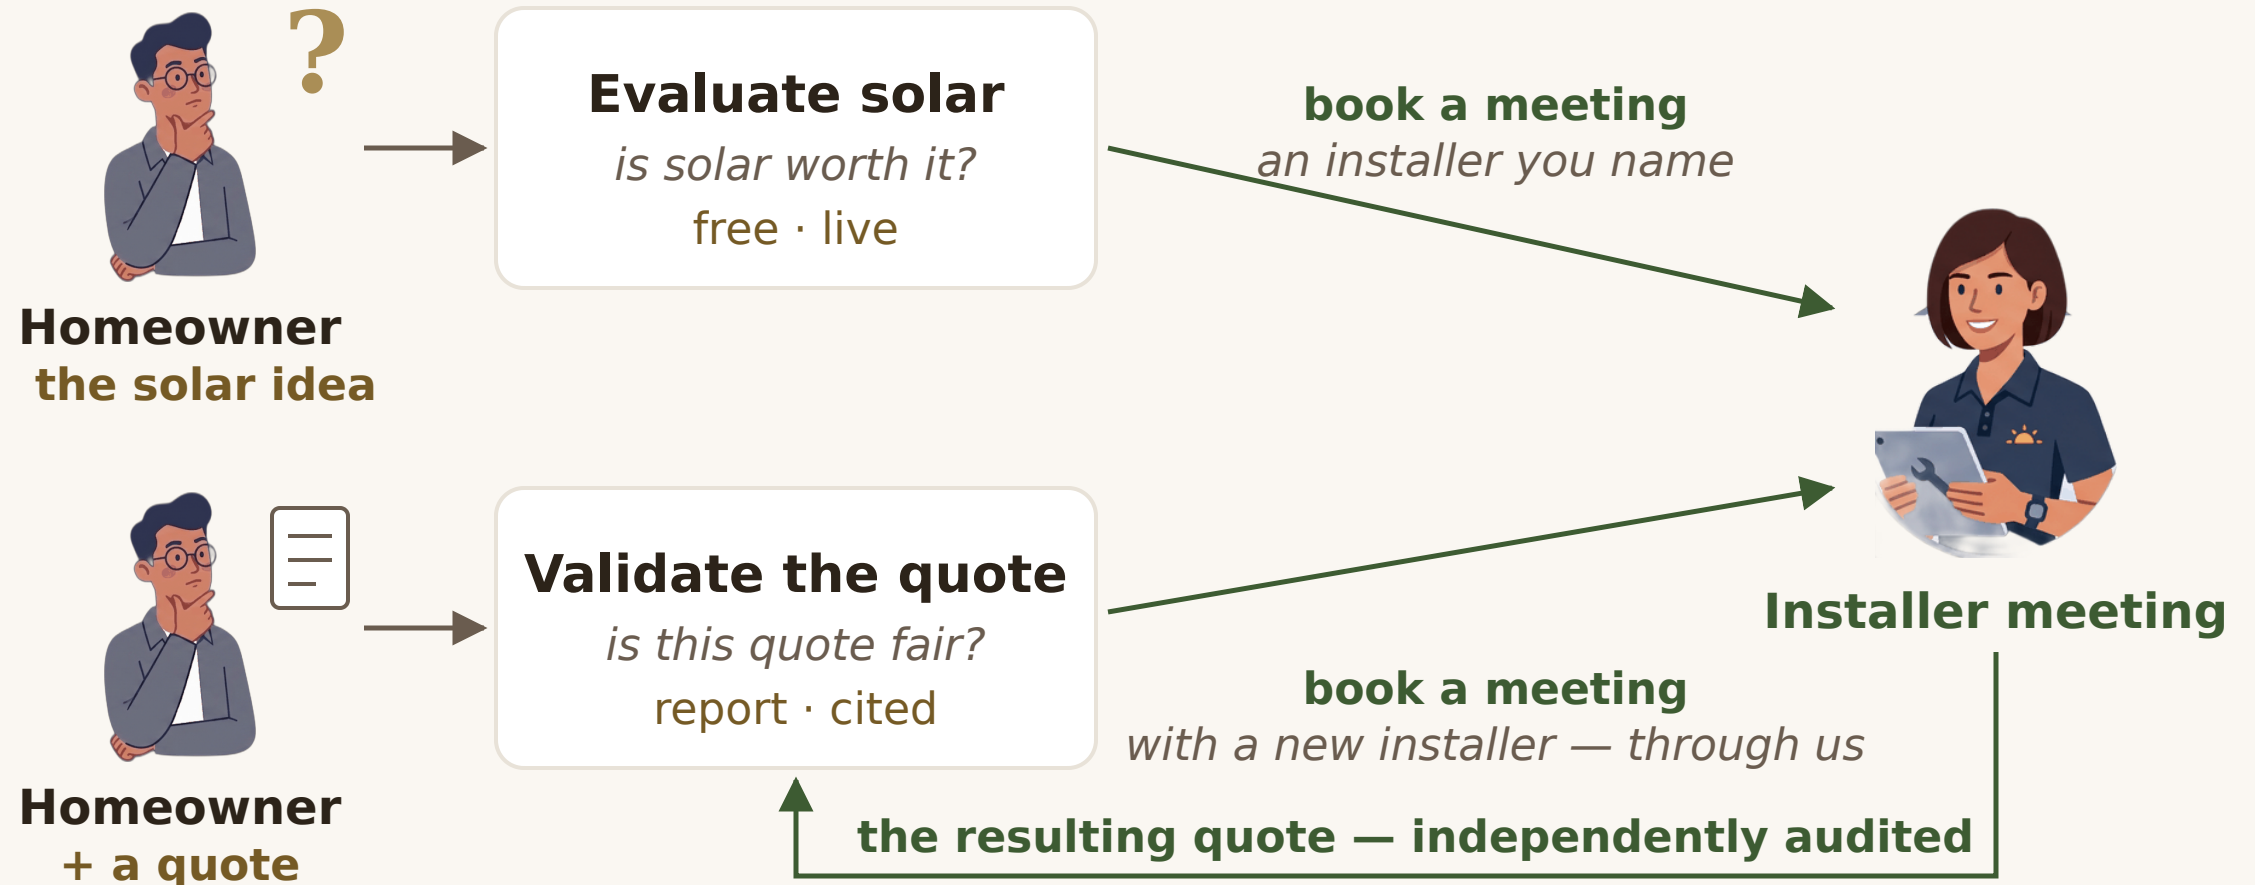

50% → 36% on **Dec 31, 2026.**

Waiting on a €10,000 system: **–€1,400.**

Five months of deadline pressure — the perfect market for a bad deal.

OUR PROPOSAL

Enter KiloWattChiaro

LIVE DEMO

Watch it work — three steps

1

Is solar worth it?

Enter your address: the roof from satellite, the savings over time. Free, no account.

2

Book the meeting

Pick the installer by name — your details go only to who you choose.

3

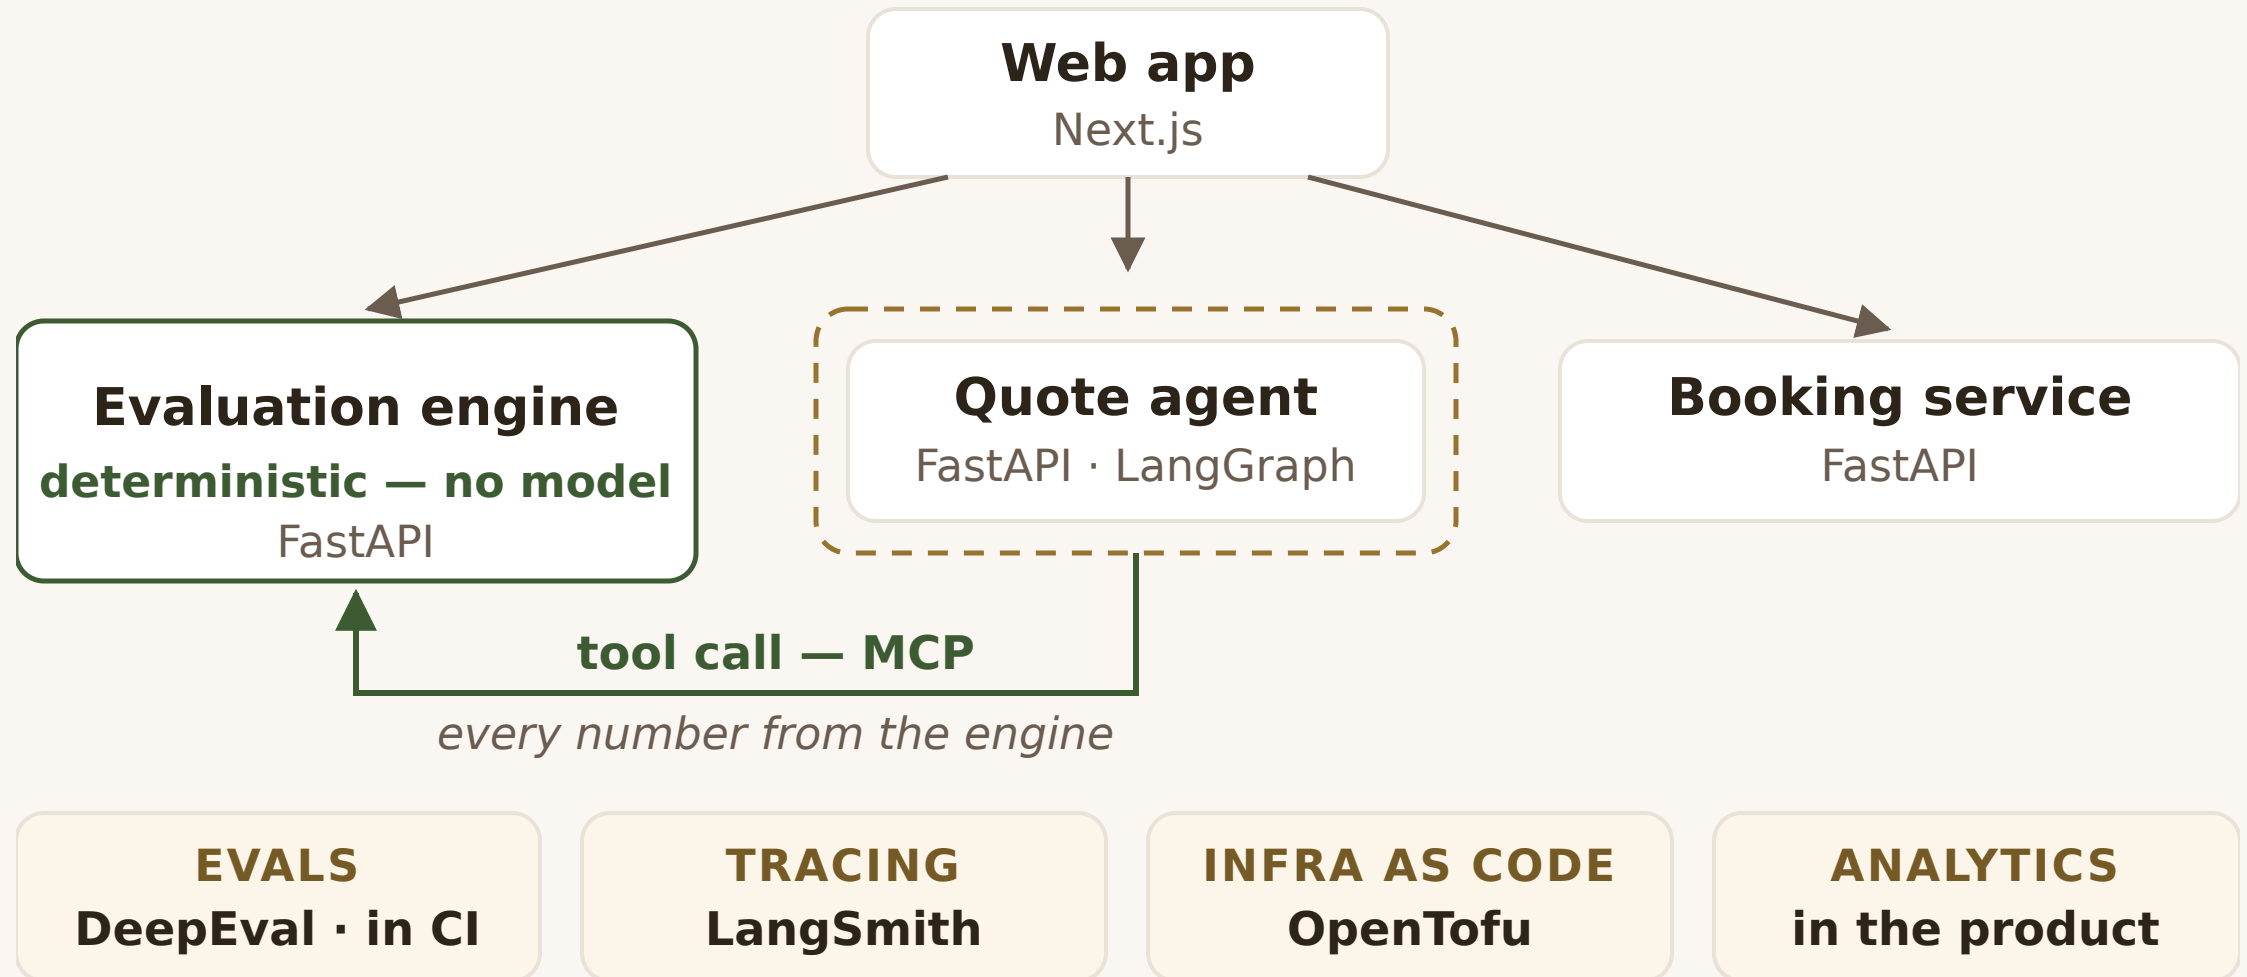

Is this quote fair?

Upload the quote: every finding backed by the component's official datasheet.

All of it live at **kilowattchiaro.it**

UNDER THE HOOD

The system design

ARCHITECTURE OF TRUST

The verdict is installer-blind — and the math is public

THE CHECK

Installer-blind

the engines that judge your roof
never know an installer exists

Auditable

deterministic — same answer twice
methodology and code published

You book — the installer is informed of your evaluation

THE INTRODUCTION

You name who calls

consent per installer

Your installer, alone

never an auction

THE OTHER SIDE OF THE MARKET

Installers pay for contacts, not customers

TODAY

**The same contact, resold
again and again — no
guarantee anyone answers**

WHAT WE'RE TESTING

**One introduction — exclusive
· evaluation attached · asked
for by name**

WHERE WE HONESTLY ARE

Verified pain. Conversion is the hypothesis.

PHASE 1 · NOW

**Validation.
Nothing sold.**

After a “yes” — do they book?
After a quote check — a second quote?
€0 revenue — nothing for sale

THEN

**Business model
refined**

priced on what the
pilot actually shows

AFTER

Beyond Pisa

The check already
works nationally
Coverage widens
city by city

The test: behavior, not interviews — free stays the default in the pilot

KILOWATTCHIARO

Make the rooftop solar marketplace more efficient — with trust, and clear numbers.

kilowattchiaro.it — live · free · the check needs no account.

One ask:

Know someone with a solar quote on the table? **Send them to us — the check is free.**

Domenico Di Gangi · Pisa · transparent methodology, published in full.

kilowattchiaro.it

APPENDIX · WHY NOT JUST ASK CHATGPT?

Two things it cannot do

	KiloWattChiaro	General-purpose AI OpenAI · Anthropic · Google · Meta
Book the appointment	One installer, chosen by name	Cannot.
The money math	A deterministic engine — right, and the same answer twice.	A model doing arithmetic. Not guaranteed twice.

One place **does** need a model: reading your quote. The math — **never**.

APPENDIX · NOT PRESENTED

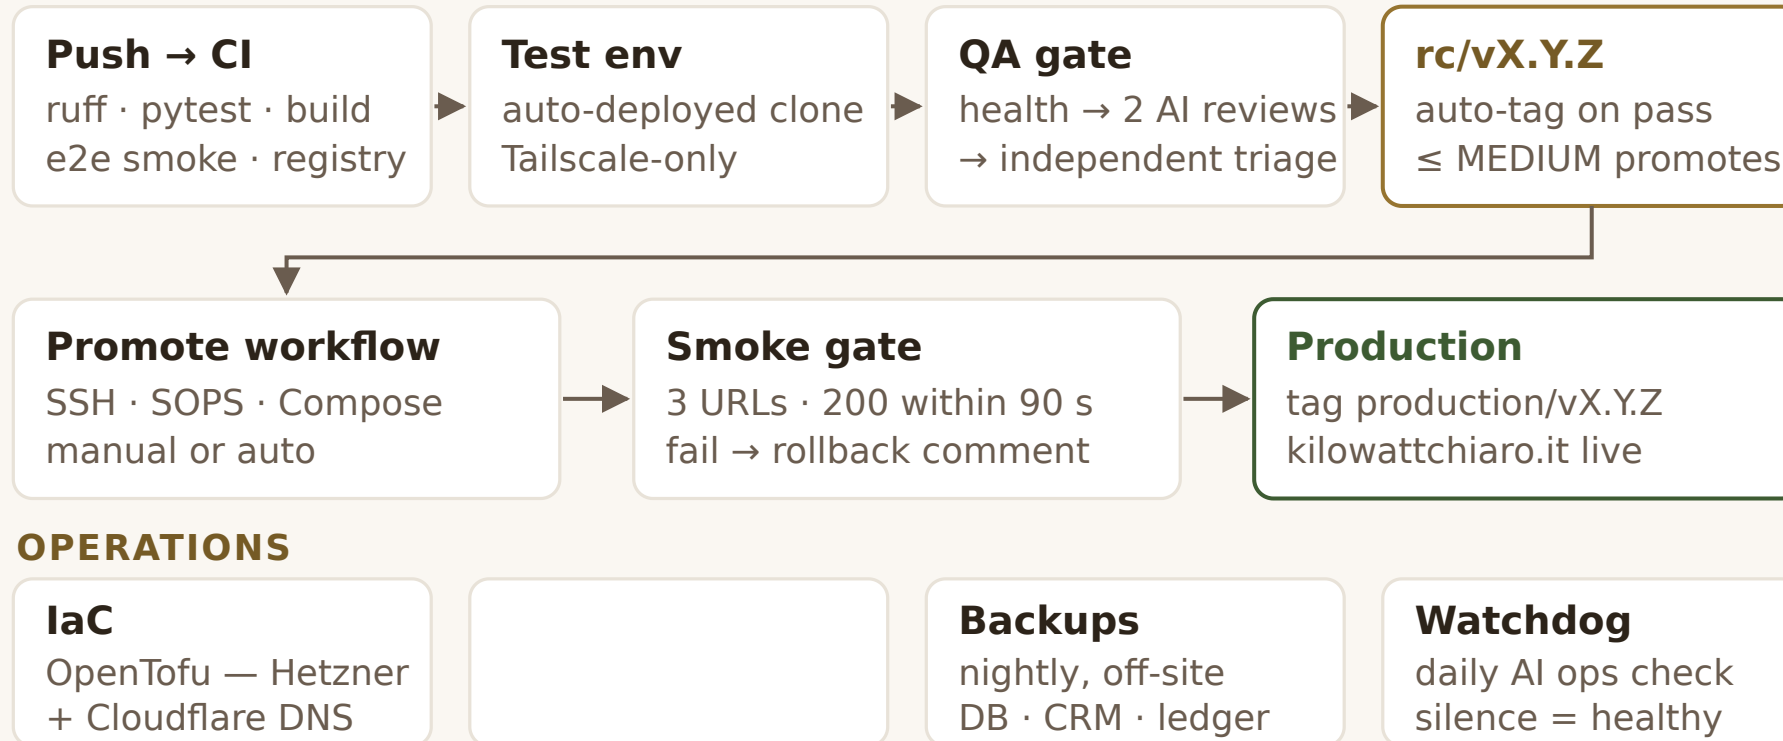

No datasheet page, no technical claim

BEFORE ANY MODEL RUNS

APPENDIX · NOT PRESENTED

From push to production — the delivery pipeline

Tests and an eval gate on every change — including a fault-injection eval that fails the build if a fabricated datasheet is ever cited.
